

# Forest Science Research

**In this, the last diorama completed by Harry Rossoll at 80 years old in 1990, marks his final work. To the left, experiments on acid rain effects are depicted, showing its impact on young seedlings.**

**Forest science research, encompassing such studies, aims to understand and manage forest ecosystems for sustainable use and conservation.**

**Featured prominently are efforts in cloning Loblolly Pines, highlighting the replication of identical specimens for consistent forest management.**
